1 Problem

2 Solution

- Centre
- Diameter
- Radius

3 Plot

Problem Statement

A circle C passes through

$$\mathbf{P} = \begin{pmatrix} -2 \\ 4 \end{pmatrix} \quad (2.1)$$

and touches the y -axis at

$$\mathbf{Q} = \begin{pmatrix} 0 \\ 2 \end{pmatrix}. \quad (2.2)$$

Which one of the following equations can represent a diameter of this circle?

(i) $\begin{pmatrix} 4 & 5 \end{pmatrix} \mathbf{x} = 6$

(iii) $\begin{pmatrix} 3 & 4 \end{pmatrix} \mathbf{x} = 3$

(ii) $\begin{pmatrix} 2 & -3 \end{pmatrix} \mathbf{x} + 10 = 0$

(iv) $\begin{pmatrix} 5 & 2 \end{pmatrix} \mathbf{x} + 4 = 0$

Finding the Centre

Let \mathbf{O} be the centre of C . Then the equation of the normal, OQ is

$$\begin{aligned} (0 \quad 1)(\mathbf{O} - \mathbf{Q}) &= 0 \\ \implies (0 \quad 1)\mathbf{O} &= 2 \end{aligned} \tag{3.1}$$

Also,

$$\begin{aligned} \|\mathbf{O} - \mathbf{P}\|^2 &= \|\mathbf{O} - \mathbf{Q}\|^2 \\ \implies 2(\mathbf{P} - \mathbf{Q})^T \mathbf{O} &= \|\mathbf{P}\|^2 - \|\mathbf{Q}\|^2 \\ \text{or, } (1 \quad -1)\mathbf{O} &= -4 \end{aligned} \tag{3.2}$$

(3) and (4) result in the matrix equation

$$\begin{pmatrix} 1 & -1 \\ 0 & 1 \end{pmatrix} \mathbf{O} = \begin{pmatrix} -4 \\ 2 \end{pmatrix} \tag{3.3}$$

yielding the augmented matrix

$$\begin{pmatrix} 1 & -1 & -4 \\ 0 & 1 & 2 \end{pmatrix} \leftrightarrow \begin{pmatrix} 1 & 0 & -2 \\ 0 & 1 & 2 \end{pmatrix} \implies \mathbf{O} = \begin{pmatrix} -2 \\ 2 \end{pmatrix} \tag{3.4}$$

Finding the Diameter

(i) $(4 \ 5) \mathbf{O} = 2 \neq 6$. Incorrect.

(ii) $(2 \ -3) \mathbf{O} + 10 = 0$. Correct.

(iii) $(3 \ 4) \mathbf{O} = 2 \neq 3$. Incorrect.

(iv) $(5 \ 2) \mathbf{O} + 4 = -2 \neq 0$. Incorrect

Finding the Radius

The radius of C is obtained as

$$r = \|O - P\| = 2 \tag{3.5}$$

Plot

The code in
